

Furnotel [automatic coffee machine](#) has perfected the complete brewing process for espresso. That's why the new series is able to prepare coffee to the same standard as the best coffee bars. You can make the best espresso or cappuccino of all time-at the touch of a button, very easy to use.

The innovative nozzle technology prepares fine, compact and very tempting milk foam. The machine switches from milk to milk foam fully automatically. Thanks to a world first, the adjustable milk and milk foam temperature, it is possible to create sophisticated trend specialties to professional barista standard – at just the touch of a button.

Furnotel coffee machines are self-explanatory, easy and intuitive to use. To name just one example, the filter cartridge and coffee machine are wirelessly linked by RFID technology. The machine automatically recognizes the filter and selects the appropriate settings.

The packs are incredible performance into compact dimensions. All the control elements are conveniently accessible on the front. The removal of the water tank and refilling of the bean container also take place conveniently from the front. The user can rename the different specialty coffees and position them on the start screen. There are no limits to the imagination. Maintenance is just as easy as preparing a coffee: one touch of a button is all that's needed.
